

## Donning guide for Tornado

Ensure the respirator is assembled correctly and donned **BEFORE** entering the contaminated area. Long hair should be worn tied up behind your head.

1. Put on the belt mounted blower unit and tighten to fit securely.

2. Turn on the unit.

3. Slide the unit around to your back.

4. Don the hood, adjusting the seal to fit comfortably under your chin and in front of your ears.

**Wash your hands thoroughly before and after donning your respirator.**
